

Advances in adapting low-cost sensors for sustainable air quality monitoring and evidence-informed action in African cities: Scalable experiences from AirQo

Deo Okure, Gideon Lubisa, AirQo | Makerere University

About AirQo

Founded in 2015 at Makerere University, to close the gaps in air quality management in Uganda and across Sub-Saharan Africa through leveraging technology innovation to influence action through contextual evidence

Vision

Clean air in all African Cities

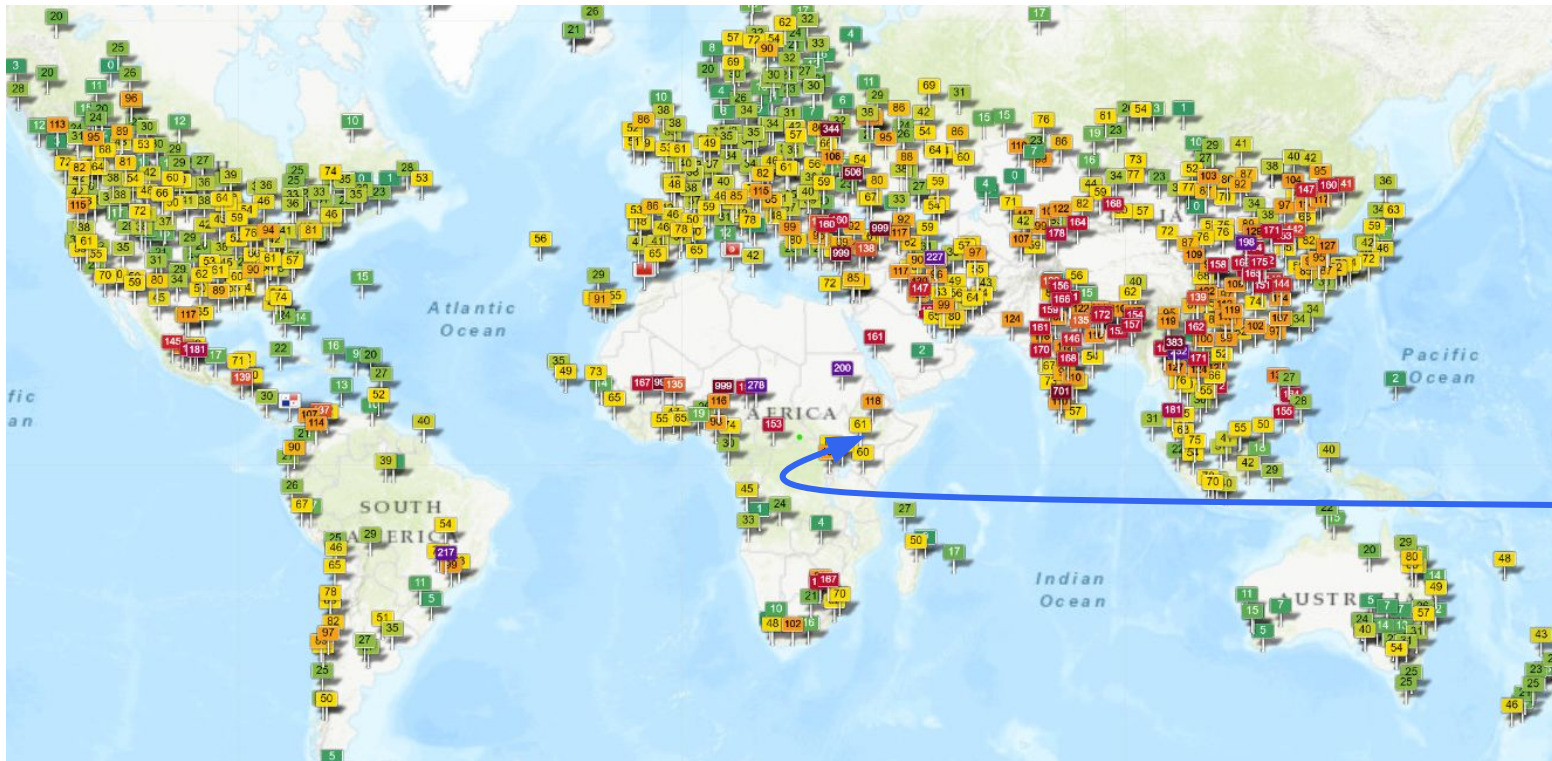

Mission

To collect, analyse and forecast air quality data to international standards and work with partners to reduce air pollution and raise awareness of its effects in African cities.

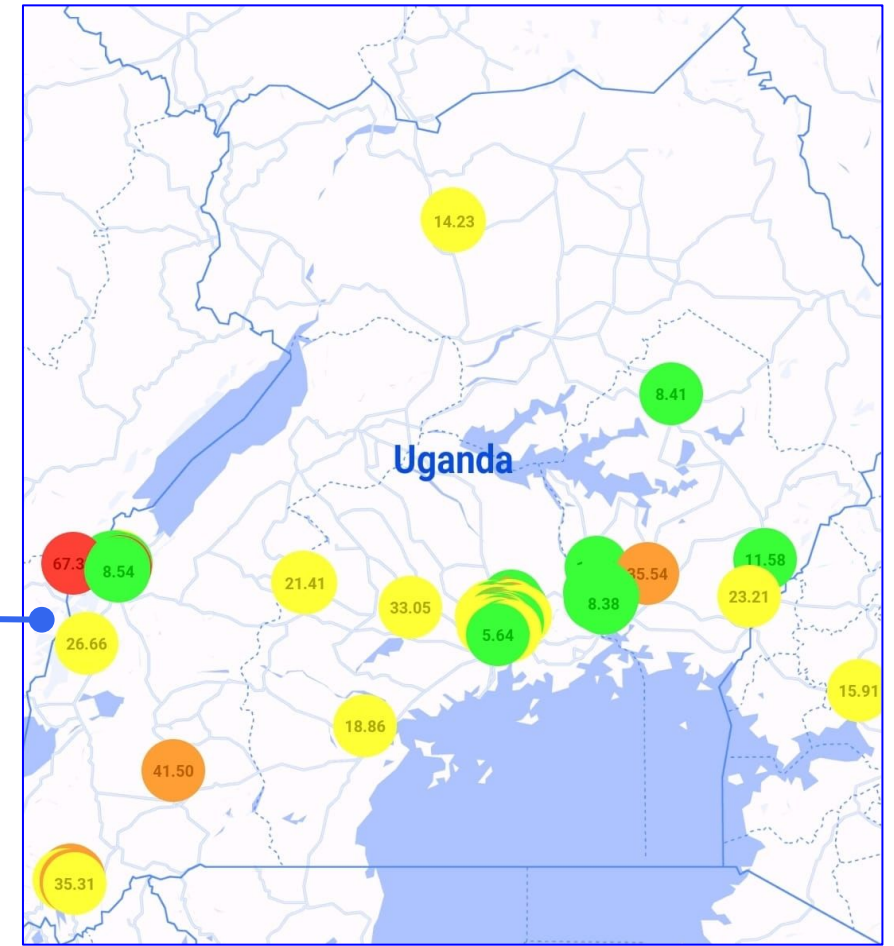

Low-cost sensors are helping close the air quality data gaps in African cities

Source: www.waqi.info (March. 26, 2023: 13:40 EAT)

www.platform.airqo.net (March. 26, 2023: 13:40 EAT)

STEADY GROWTH in AQ data in Africa:

- Low-cost approaches and innovation can close the existing gaps in African cities
- Increasing depth and breadth
- Contextual protocols using existing networks
-
- Integration of data for action

Transition from 'elaborate' to portable

What makes it low-cost?

- Purchase cost threshold
 - \$100-\$2,500 (Jiao et al, 2016; Borrego et al., 2018; Karagulian, 2019; US-EPA, 2020, etc.) vs \$30,000 for a single pollutant
 - Limits resolution
- Installation and maintenance
- Data retrieval/access
- Logistics of security and site access

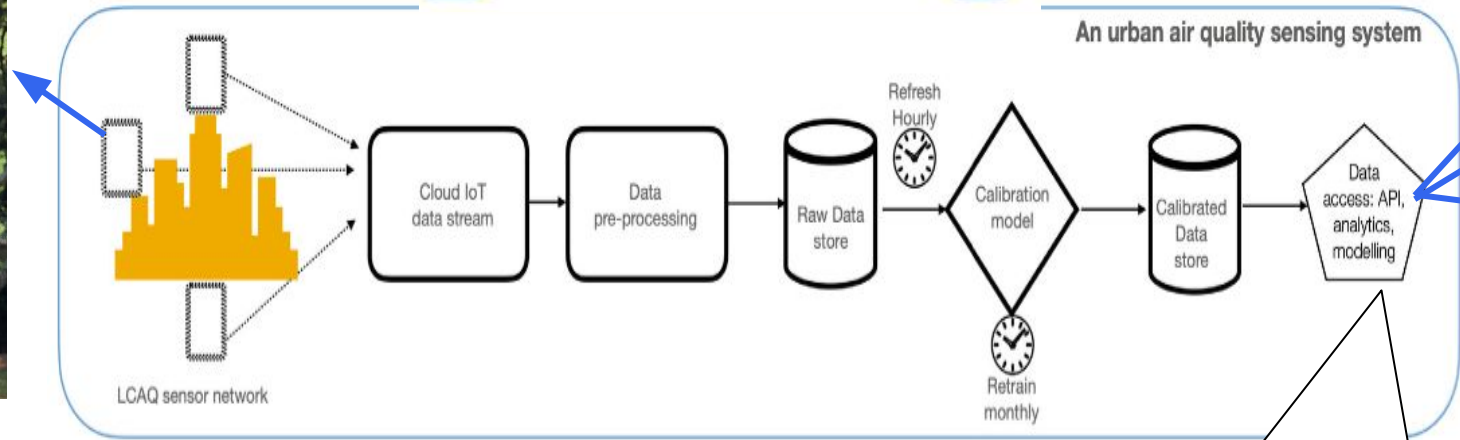

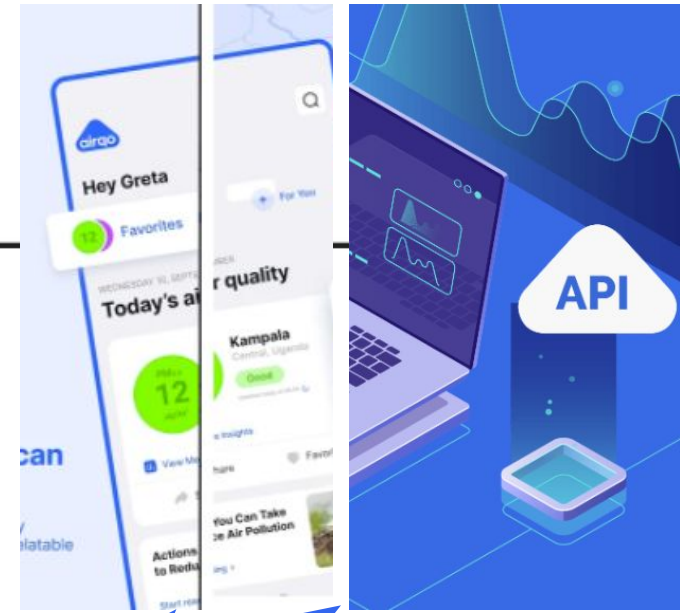

*Can LCS be adapted for sustainable
smart air quality monitoring in
African cities?*

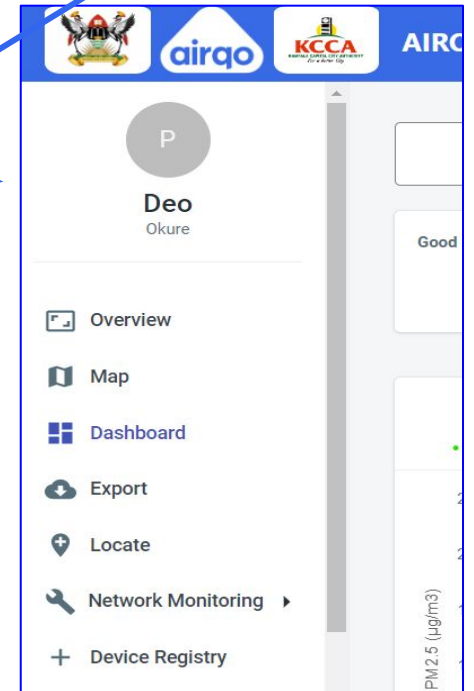

Advances from AirQo

- Robust cloud-based infrastructure built for data quality assurance using Machine Learning techniques
- ML prediction models

- Over 160+ locally developed devices deployed across Africa
- Flexible power and data access configurations

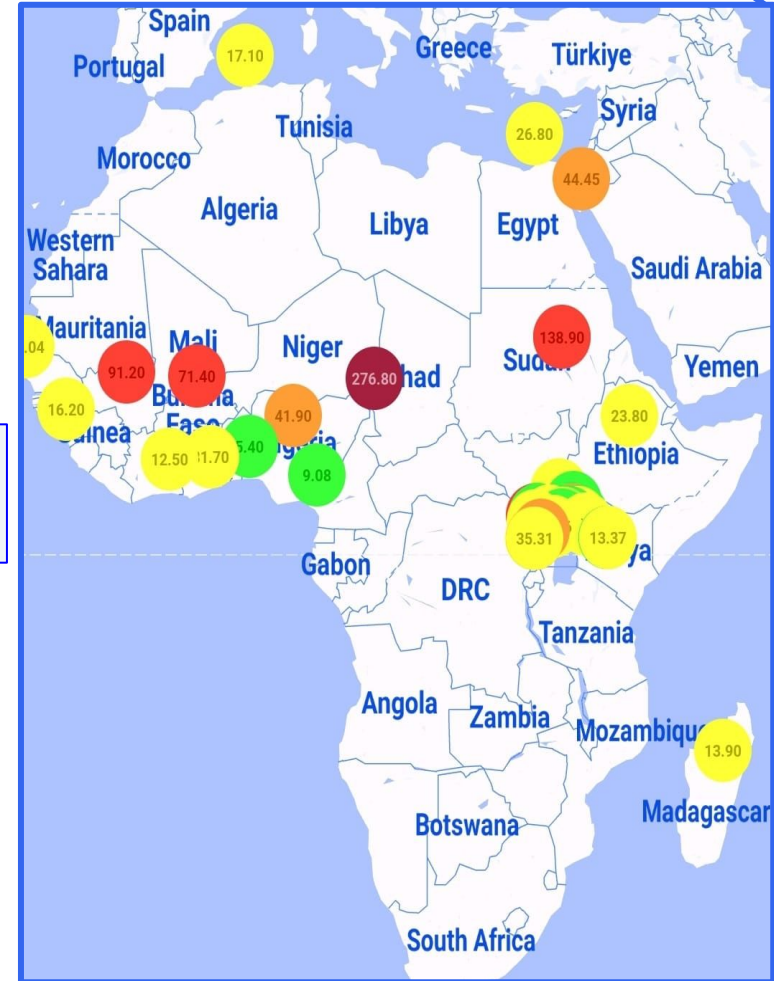

- Custom built digital platforms for data access
- Programmatic data access through the API

Enabling access through custom digital platforms and API

Progressively deploying scalable smart networks across Africa

- Uganda
- Kenya
- Cameroon
- Burundi
- Nigeria
- Ghana
- Senegal
- Mozambique
- South Africa

What are the effective avenues for utilising data and novel evidence for (progressive) evidence-informed actions?

MAKERERE UNIVERSITY

Collaboration synergies as enablers for action

Inclusive and multi-stakeholder approach to building collaborations

U.S. Mission Uganda Retweeted

U.S. Ambassador to Uganda @USAmbUganda · May 7

Today I learned about  /  cooperation across sectors to improve the quality of the air we all breathe and how this can save lives & create jobs. #CleanAir4Kampala #AQAW2021 #KnowYourAir

- Air quality as a multi-sectoral issue
- Recognising the uniqueness in every collaboration

MAKERERE UNIVERSITY

Contextual data for capacity enhancement

400+

government officials trained on data access

2000+

students and teachers engaged through the science, technology, engineering, and math programme (STEM)

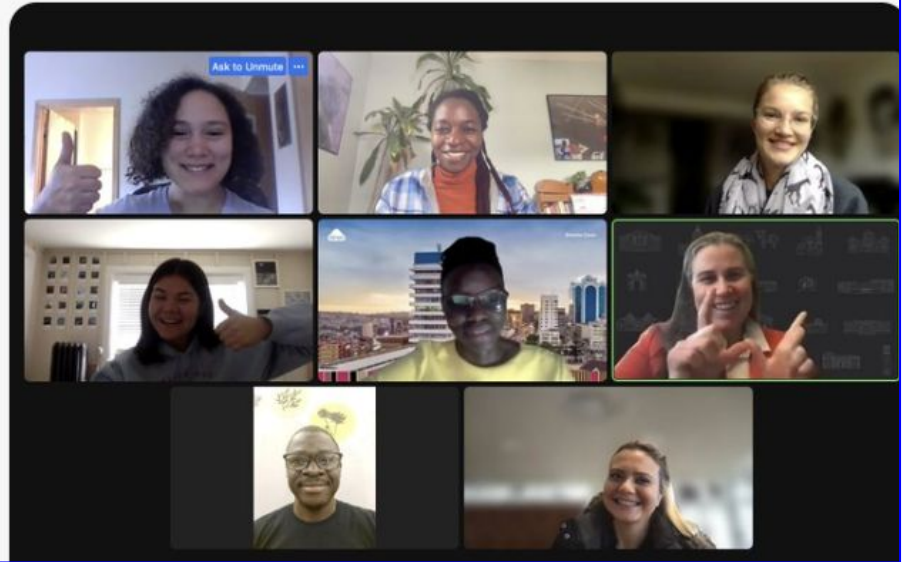

500+

young data scientists across Africa empowered with skills in real air quality datasets and creating data solutions relevant to the African context.

8+ Policy outputs and initiatives

Deo Okure @OkureDo · Dec 21, 2022
Two weeks since our last class with this year's cohort of the @NelsonInstitute Capstone. It was fulfilling to see students appreciate the data management landscape through the @AirQoProject platform. Thanks to @uwmadisonafrica, @Priscillaa_says, @Baalmart . Outputs coming soon!

MAKERERE UNIVERSITY

***Reflection: Defining the
future of air quality
management***

What AQ management strategies have been (*being*) implemented in Africa for the past 20 years?
