

Inequalities of Air Pollution Exposures and Associated Health Effects in the U.S.

May 20, 2020

12 PM - 2 PM EDT

About the webinar: A growing body of research has examined inequitable distribution of air pollution exposure across racial and socioeconomic groups in the United States. Questions remain about which population groups are inequitably exposed and likely to benefit from air quality improvements. This session will provide an overview of social determinants of health and exposure in the United States, air pollution inequality research to date, and applications in epidemiological research and policy decisions.

Speakers

Sam Harper, McGill University

Jonathan Levy, Boston University

Jane Clougherty, Drexel University

Veronica Eady, California Air Resources Board

Chairs

Michael Jerrett, University of California- Los Angeles

Jana Milford, University of Colorado
