

# Workshop Charge Questions

How can existing data be leveraged to understand potential exposures from UOGD?	What potential UOGD exposures are not well understood with existing data and merit original research?	What exposure pathways and phases of UOGD should be the focus?	In conducting such research, what are your recommendations for considering regulatory, environmental, and industry-practice variability over time and across regions?	What is the value of the research for decision-makers (e.g., regulators, industry, community members, and scientists conducting research)?
