# Addressing Climate and Air Quality in India and the United States

Vijay Limaye  
Senior Scientist, NRDC

Health Effects Institute Annual Conference  
2 May 2023

---

This work was supported by the Wellcome Trust [#216093/Z/19/Z]

# Climate-Linked Threats to Health in India

- Indian cities face serious and intensifying health risks from climate change, extreme heat & air pollution
- National policy responses to address these threats are underway:
  - **Climate change targets**
  - **Heat Action Plans and cool roofs**
  - **India Cooling Action Plan**
  - **National Clean Air Programme**

**India to update climate commitment with 50% renewable power mix p**

**Heatwave Pangs: Why Heat Action Plans Are Need Of The Hour In India**

The first Heat Action Plan (HAP) was designed and implemented experiencing severe and prolonged heatwave conditions this year implementation of HAPs have become essential.

Ministry of Environment, Forest and Climate Change

**India Cooling Action Plan Launched**

**National Clean Air Programme: Centre aims at 40% reduction in particulate matter by 2026**

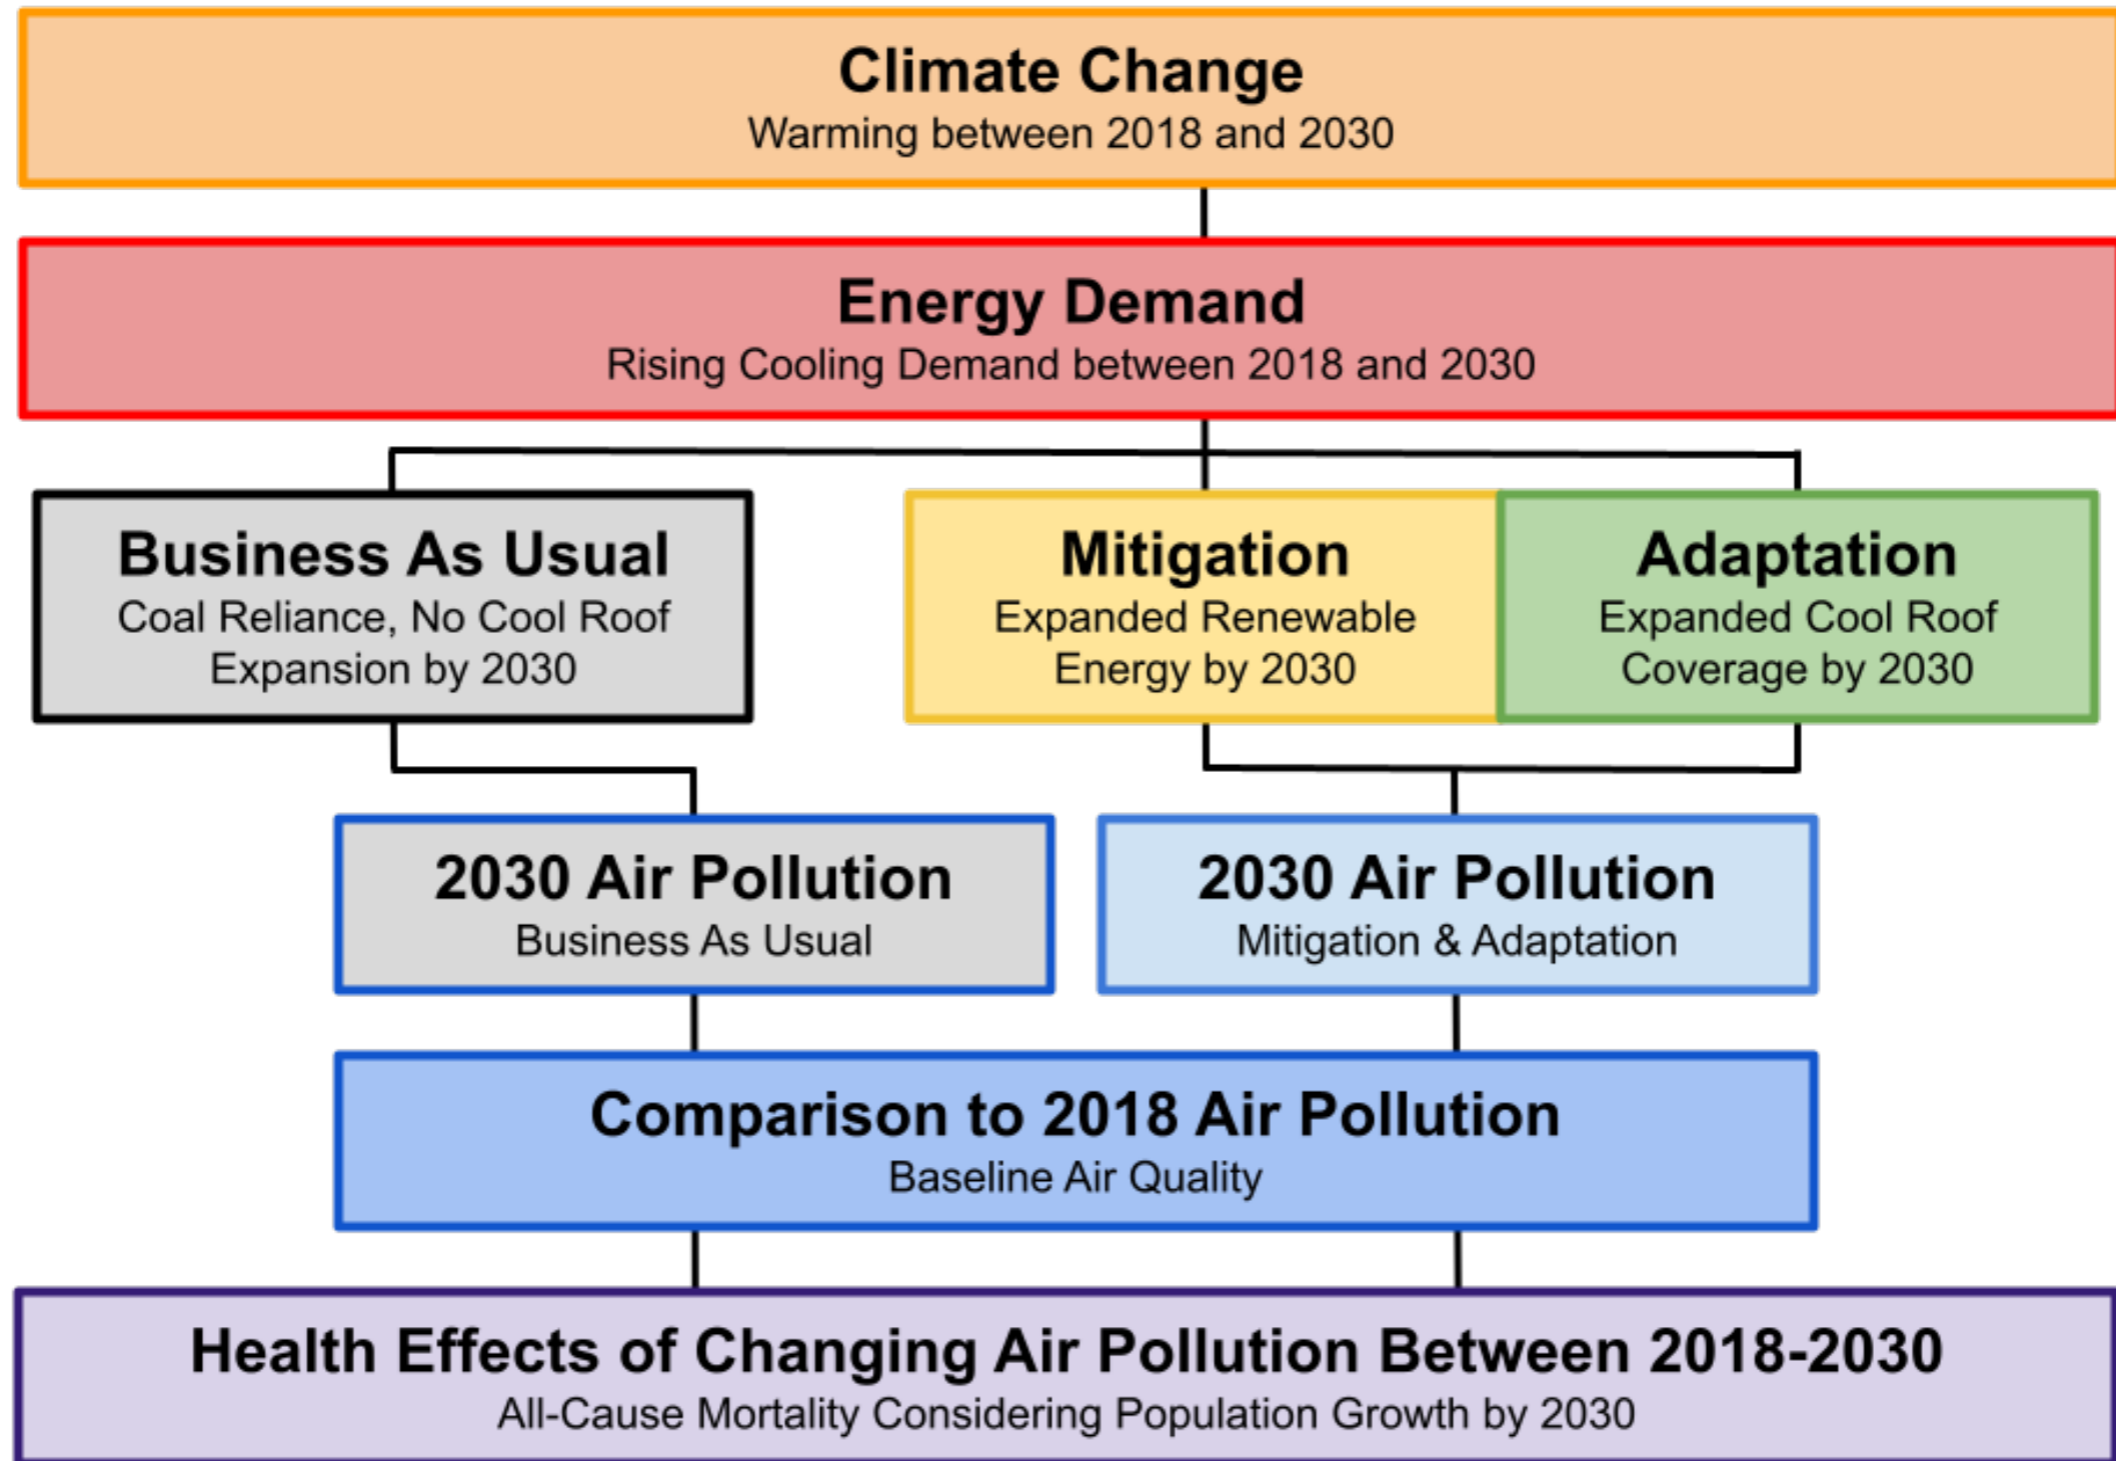

*What are the local benefits of mitigation and adaptation actions for air quality and health?*

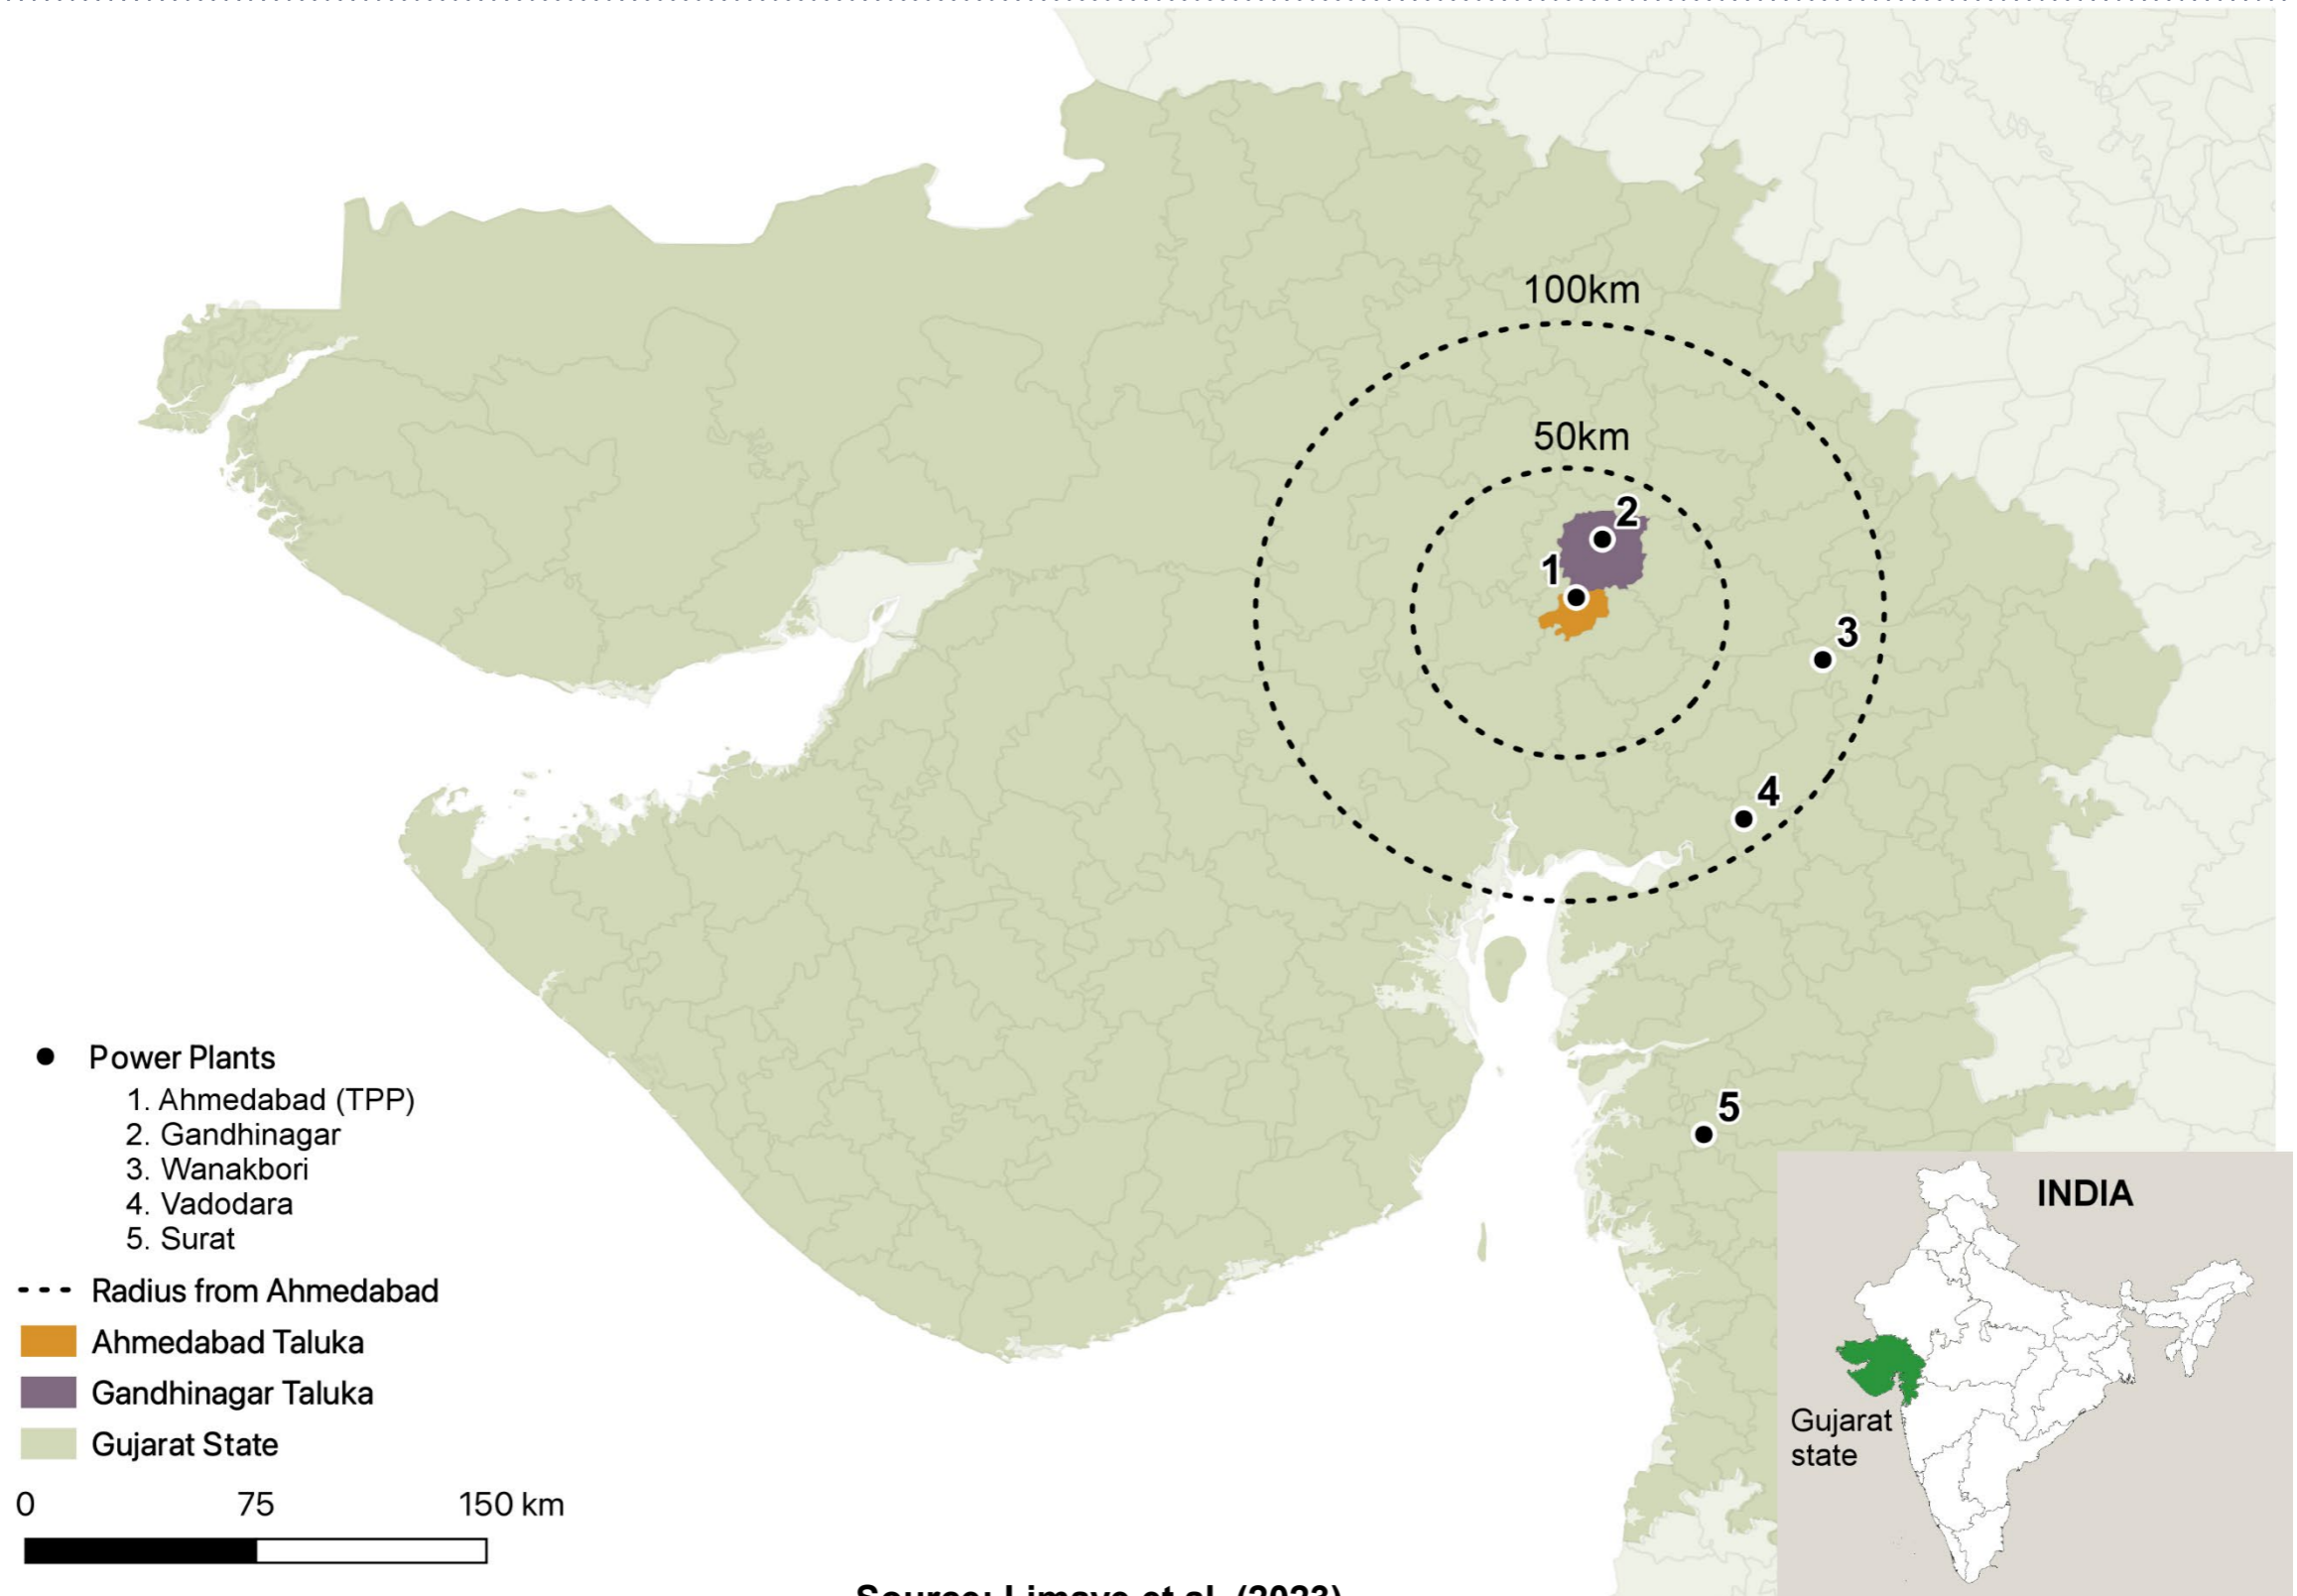

# Approach

# Study Area

Source: Limaye et al. (2023)

# Climate Change & Energy Demand: Methods

Impact of Cool Roofs on Cooling Demand

Impact on Energy Demand

Plot Area - 1,32,320 square meter

Roof Area - 52,916.2 square meter

# Climate Change & Energy Demand: Results

	<b>2018 Baseline</b>	<b>2030 BAU</b>	<b>2030 M&amp;A</b>
<b>Average Temperature (°C)</b>	27.58	28.39	28.39
<b>Wind Speed at 10m (m/s)</b>	3.58	3.38	3.38
<b>Relative Humidity at 2m (%)</b>	55.13	53.10	53.10
<b>Additional Cool Roof Area Coverage from 2018 (km<sup>2</sup>)</b>	-	0	20.60
<b>Torrent Power Plant (TPP) Power Supply (TWh)</b>	1.70	2.10	0
<b>Renewable Energy Supply to Ahmedabad (TWh)</b>	0.73	6.63	8.73
<b>Ahmedabad Cooling Electricity Demand (TWh)</b>	1.46	4.22	4.01

**Under BAU, coal energy supply increases slightly. With mitigation, renewables can make up for energy supplied to city.**

# Climate Change & Energy Demand: Results

	<b>2018 Baseline</b>	<b>2030 BAU</b>	<b>2030 M&amp;A</b>
<b>Average Temperature (°C)</b>	27.58	28.39	28.39
<b>Wind Speed at 10m (m/s)</b>	3.58	3.38	3.38
<b>Relative Humidity at 2m (%)</b>	55.13	53.10	53.10
<b>Additional Cool Roof Area Coverage from 2018 (km<sup>2</sup>)</b>	-	0	20.60
<b>Torrent Power Plant (TPP) Power Supply (TWh)</b>	1.70	2.10	0
<b>Renewable Energy Supply to Ahmedabad (TWh)</b>	0.73	6.63	8.73
<b>Ahmedabad Cooling Electricity Demand (TWh)</b>	1.46	4.22	4.01

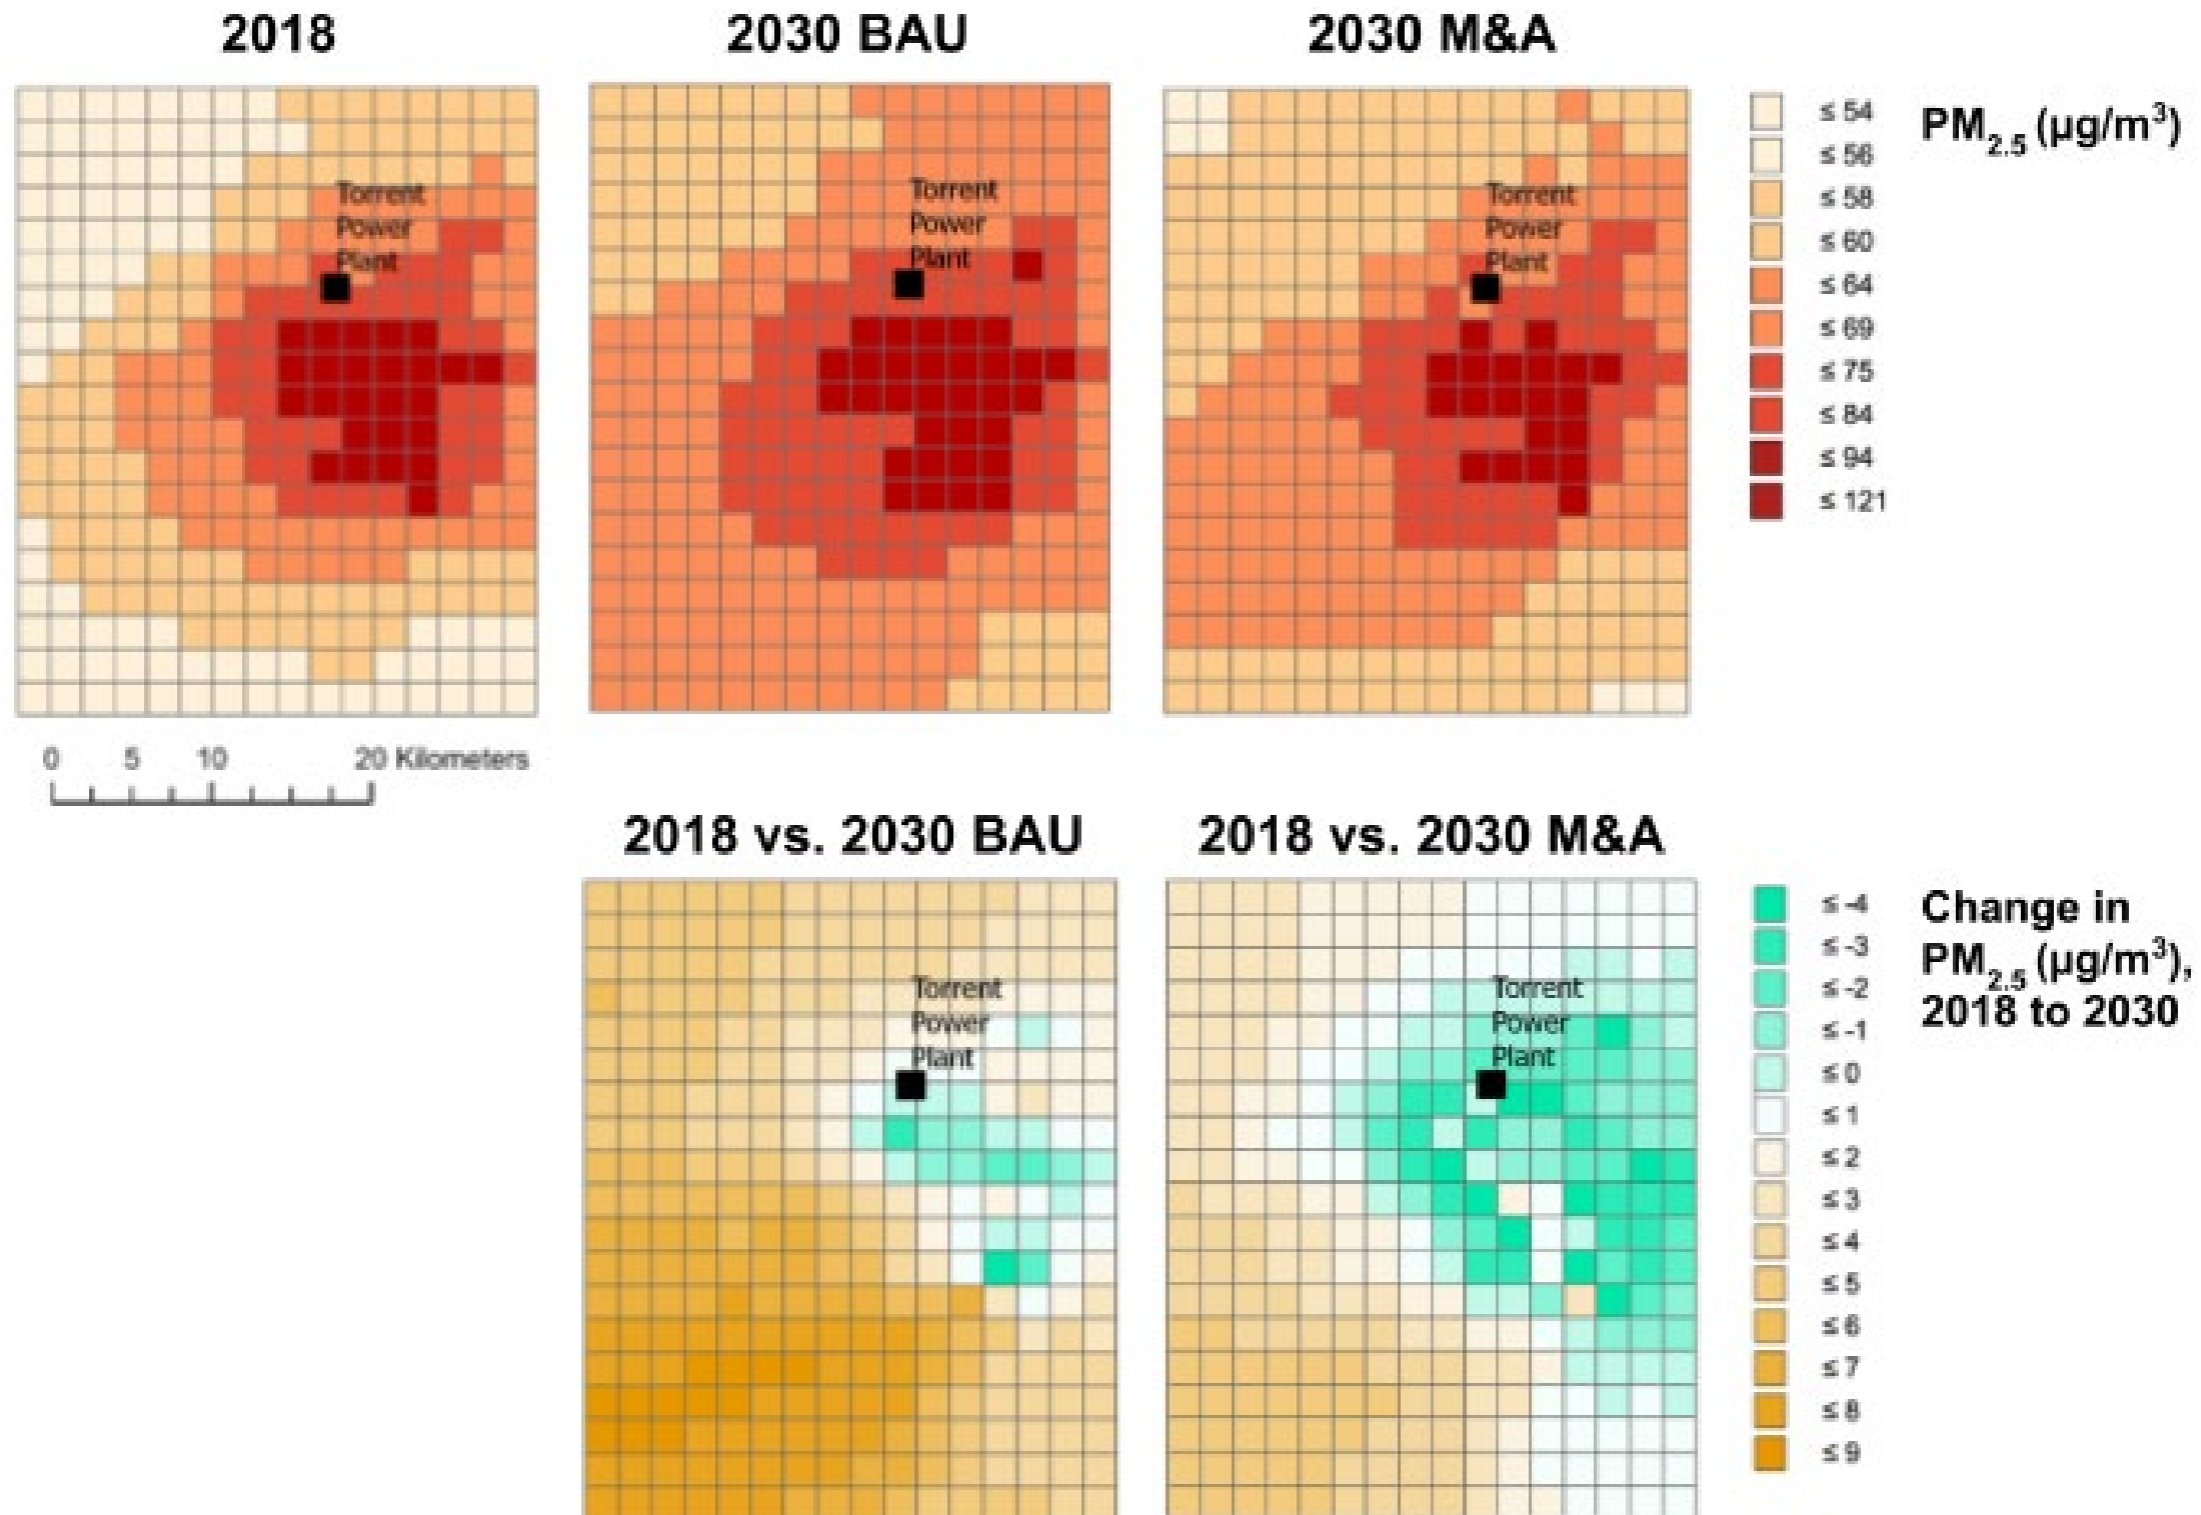

**Under BAU, cooling energy demand increases by a factor of 2.9. With cool roof adaptation, cooling energy demand reduced by 0.21 TWh**

# Air Quality Modeling: Methods

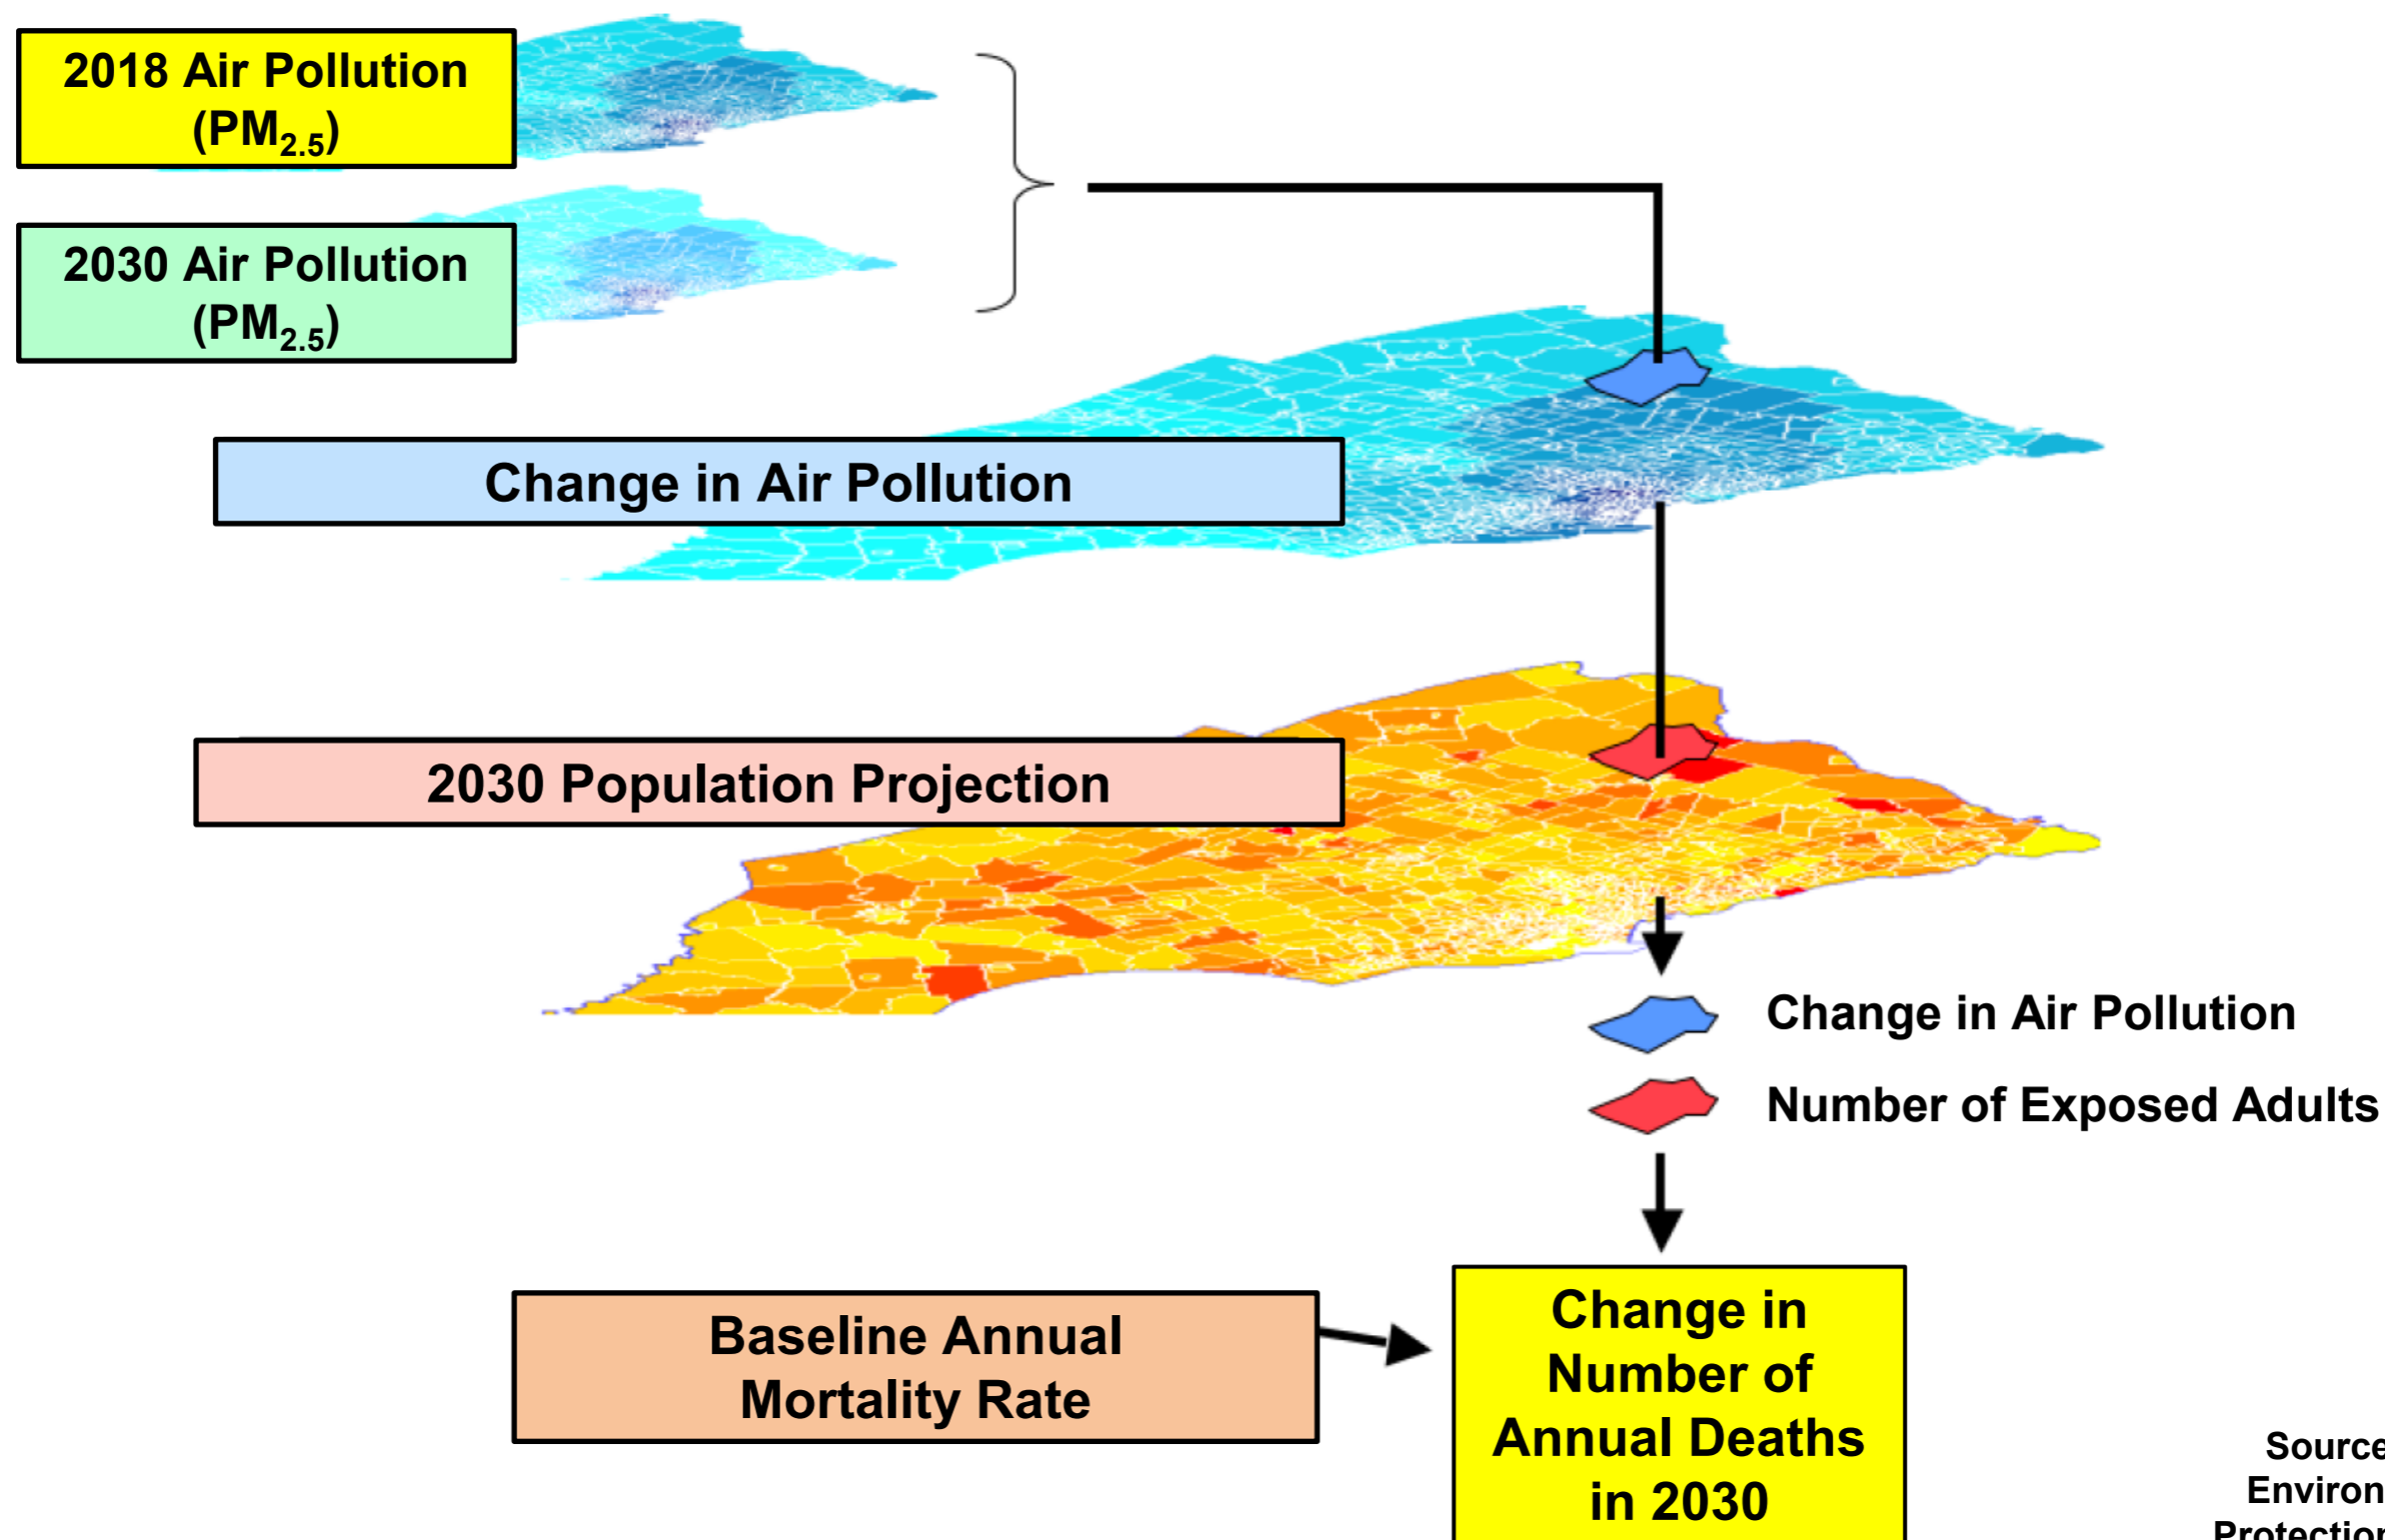

Scenario	Energy Sector Emissions (Mitigation)	Cool Roofs (Adaptation)
2018 Baseline	<ul style="list-style-type: none"> <li>• Direct estimate of TPP emissions in 2018</li> <li>• Apply 2018 meteorology and boundary conditions</li> </ul>	<ul style="list-style-type: none"> <li>• Estimate current cooling energy demand from buildings, consistent with 5% cool roof area coverage</li> </ul>
2030 Business-As-Usual (BAU)	<ul style="list-style-type: none"> <li>• Climate change affects ambient temperatures and cooling energy demand</li> <li>• 2030 meteorology and boundary conditions</li> <li>• <b>Adjust coal power plant emissions to reflect slight growth relative to 2018</b></li> </ul>	<ul style="list-style-type: none"> <li>• Estimate current cooling energy demand from buildings, consistent with 5% cool roof area coverage</li> </ul>
2030 Mitigation and Adaptation (M&A)	<ul style="list-style-type: none"> <li>• Climate change affects ambient temperatures and cooling energy demand</li> <li>• 2030 meteorology and boundary conditions</li> <li>• <b>Eliminate coal power plant pollution emissions and assume additional Ahmedabad city power demand met by renewable energy sources</b></li> </ul>	<ul style="list-style-type: none"> <li>• <b>Assume total of 20% cool roof area coverage (15% beyond the 5% baseline in 2018) leads to reduction in cooling energy demand from buildings</b></li> </ul>

# BenMAP Health Impact Estimates: Methods

# BenMAP Health Impact Estimates: Methods

	<b>2018 Baseline</b>	<b>2030 BAU</b>	<b>2030 M&amp;A</b>
<b>BenMAP-CE Inputs</b>			
<b>Population (age 0-99)</b>	<b>8.46 million</b>	<b>9.31 million</b>	<b>9.31 million</b>
<b>Annual Daily Average PM<sub>2.5</sub> (µg/m<sup>3</sup>, manually weighted)</b>	<b>63.40</b>	<b>65.50</b>	<b>64.90</b>
<b>Annual Daily Average PM<sub>2.5</sub> (µg/m<sup>3</sup>, population weighted)</b>	<b>71.04</b>	<b>75.18</b>	<b>70.93</b>
<b>Change in PM<sub>2.5</sub> (% change) from 2030 to 2018 (µg/m<sup>3</sup>, population weighted annual average)</b>	-	<b>+4.13</b> (+5.81%)	<b>-0.11</b> (-0.15%)
<b>Mitigation &amp; Adaptation actions result in 922-1,414 fewer deaths in 2030 compared to a Business-As-Usual 2030 scenario.</b>			
<b>Pope et al. 2015</b> All-cause mortality, age 30-99 (95% CI)	-	<b>+1,389</b> (1,092, 1,681)	<b>-25</b> (-22, -28)
<b>Turner et al. 2016</b> All-cause mortality, age 30-99 (95% CI)	-	<b>+1,193</b> (793, 1,585)	<b>-23</b> (-18, -27)
<b>Burnett et al. 2018</b> Non-accidental mortality, age 25-99 (95% CI)	-	<b>+870</b> (648, 1,088)	<b>-52</b> (-38, -66)

# Policy Recommendations

---

- Substituting renewable energy for highly polluting fossil fuels benefits health
- Indian cities can quantify adaptation benefits
- Decisionmakers in India should consider air quality and health effects of climate and energy policies
- Interdisciplinary approaches can identify ways to reduce climate threats to health

# Policy Applications and the U.S. Experience

## Health as the focus of air pollution policy TH PREMIUM

Health must be turned into a feature and eventually a function of air pollution policy
