Health Effects Institute Research Report Number 23

Responses of Susceptible Subpopulations to Nitrogen Dioxide Paul E. Morrow and Mark J. Utell

February 1989

- p. 12 At the end of the last paragraph under Statistical Methods, insert the following: All p-values given in this report are two-tailed.
- p. 19 In Table 4, Fisher's exact test rather than the standard chi-squared test should have been used. The p-values for the Fisher test are: 0.16 for Family History of Respiratory Disease, 0.61 for Seasonal Allergies, and 0.17 for Use of Asthma Medication(s). In addition, the chi-squared value given under Seasonal Allergies should be 0.85, rather than 1.85.
- p. 25 In the last sentence of the first paragraph under Elderly Normal Subjects, Table 9 should not be referred to. The sentence should read: "Consequently, none of the data summarized in Table 10, or obtained from the symptom and subject history questionnaires (Table 7), was associated with group responsiveness."
