## Contents

Supplementary Tables and Figures: Community-based Cancer Screening Program (CBCSCP) ..... 3
Supplementary Tables and Figures: Golestan Cohort Study ..... 14
Supplementary Tables and Figures: Health Effects for Arsenic Longitudinal Study (HEALS) ..... 25
Supplementary Tables and Figures: Japan Public Health Center-based Prospective Study (JPHC) ..... 32
Supplementary Tables and Figures: Korean Multi-center Cancer Cohort Study (KMCC) ..... 47
Supplementary Tables and Figures: Mumbai Cohort Study (MCS) ..... 59

| Table A1. Demographic features of the Community-based Cancer Screening Program (CBCSCP) |  |  |
| :---: | :---: | :---: |
| Variable | Mean (sd) or n (\%) | n. missing values |
| Number participants | 23,759 |  |
| Age at recruitment | 47 (10) |  |
| Sex |  |  |
| Male | 11,939 (50\%) |  |
| Female | 11,820 (50\%) |  |
| Recruitment year |  |  |
| 1991 | 12,037 (51\%) |  |
| 1992 | 11,722 (49\%) |  |
| Follow-up (years) | 23 (6) |  |
| Smoking |  | 40 |
| Ever | 6,861 (29\%) |  |
| Never | 16,858 (71\%) |  |
| Pack-years (ever smokers only) | 24 (20) | 330 |
| BMI | 24 (3.4) | 56 |
| <20 | 2,423 (10\%) |  |
| 20-25 | 12,761 (54\%) |  |
| 25-30 | 7,374 (31\%) |  |
| >30 | 1,145 (5\%) |  |
| Education |  |  |
| Illiterate | 5,081 (21\%) |  |
| Elementary | 9,884 (42\%) |  |
| Junior high school | 3,267 (14\%) |  |
| Senior high school | 3,546 (15\%) |  |
| Junior college | 1,310 (6\%) |  |
| University | 617 (3\%) |  |
| Graduate school or higher | 44 (<1\%) |  |
| No answer | 10 (<1\%) |  |
| Alcohol history |  | 56 |
| Ever drinker | 2,518 (11\%) |  |
| Never drinker | 21,185 (89\%) |  |
| Mortality |  |  |
| All-cause | 6,295 |  |
| Nonaccidental | 5,281 |  |
| All cancer | 2,189 |  |
| Lung cancer | 466 |  |
| Cardiovascular disease | 1,089 |  |
| Nonmalignant lung disease | 587 |  |

Table A2. Hazard ratios (and 95\% confidence intervals) for specific causes of death in relation to $5-\mu \mathrm{g} / \mathrm{m}^{\mathbf{3}}$ increase in PM ${ }_{2.5}$ in the Community-based Cancer Screening Program (CBCSCP)

Models adjusted for recruitment year, sex, smoking status and intensity, BMI, and education.

Table A78. Beta coefficient and time interaction for $\mathrm{PM}_{2.5}$ exposure and specific causes of death within the Mumbai Cohort Study (MCS)

|  | n. events <br> (total $=126,377)$ | Effect for PM 2.5 <br> Beta Coefficient | Time interaction |
| :--- | :---: | :---: | :---: |
| All-cause | 11,777 | 0.15 | -0.026 |
| Nonaccidental | 7,881 | 0.15 | -0.027 |
| All cancer | 721 | 0.11 | -0.028 |
| Lung cancer | 75 | 0.22 | -0.027 |
| Cardiovascular disease | 2,976 | 0.16 | -0.027 |
| Nonmalignant lung disease | 1,168 | 0.15 | -0.026 |

Time interaction based upon follow-up time.

Table A79. Hazard ratios (and 95\% confidence intervals) for $\mathrm{NO}_{2}$ and specific causes of death within the Mumbai Cohort Study (MCS) after adapting variables which potentially violated the proportional hazards assumption

|  | n. events <br> (total = 126,401) | HR (95\% CI) |
| :--- | :---: | :---: |
| All-cause | 11,779 | 1.26 |
| Nonaccidental | 7,883 | $(1.16,1.37)$ |
| All cancer | 721 | 1.35 |
| Lung cancer | 75 | $(1.22,1.50)$ |
|  |  | 1.50 |
| Cardiovascular disease | 2,977 | 1.43 |
| Nonmalignant lung disease | 1,168 | $(1.15,1.64)$ |

[^4]Potential assumption violators were sex and smoking status (stratified).

[^0]:    Hazard ratios provided for a $5-\mu \mathrm{g} / \mathrm{m}^{3}$ increase in $\mathrm{PM}_{2.5}$ and a 10-ppb increase in $\mathrm{NO}_{2}$.
    Models adjusted for recruitment year, sex, smoking status and intensity, BMI, and education.

[^1]:    Hazard ratios provided for a $5-\mu \mathrm{g} / \mathrm{m}^{3}$ increase in $\mathrm{PM}_{2.5}$ and a $10-\mathrm{ppb}$ increase in $\mathrm{NO}_{2}$ (each are single pollutant models).
    Potential assumption violator was pack-years (removed from analysis).

[^2]:    *: Refers to a participant being within an urban center as defined by the Global Human Settlement Layer.
    $\dagger$ : Refers to gradient values for urbanicity as described by Gao \& O’Neill (2020).
    Models additionally adjusted for recruitment year, sex, smoking status and intensity, BMI, occupation, diet, and alcohol intake.

[^3]:    *: Refers to a participant being within an urban center as defined by the Global Human Settlement Layer.
    $\dagger$ : Refers to gradient values for urbanicity as described by Gao \& O’Neill (2020)
    Models additionally adjusted for recruitment year, sex, smoking status and intensity, BMI , occupation, diet, and alcohol intake.

[^4]:    Hazard ratios provided a 10-ppb increase in $\mathrm{NO}_{2}$.
